
likely to be responsible for removing the dried faeces, although they may pay a labourer or service provider to do this.

At shared facilities, a person (or persons) to clean and carry out other maintenance tasks (e.g. repairs to superstructure) on behalf of all users needs to be identi□ed.

The success of this system depends on the e□cient separation of urine and faeces, as well as the use of a suitable cover material. Therefore, the urine separation plumbing must be kept free of blockages to prevent urine from backing up and over□owing into the dehydration vaults, and there should be a constant supply of ash, lime, soil, or sawdust available to cover the faeces.

E t / a : The dried faeces removed from the container should be in a safe, useable form with a zero to
