

Our multi-disciplinary environment maintains our creative power to resolve the challenges that lie at the interfaces of traditional academic silos. Our research delivers tangible solutions to mitigate the global effects of climate change, create zero-carbon buildings and communities, and improve the well-being of our students and staff. Our students pursue exciting courses which prepare them for the future of the built environment. We operate in a time when students and staff face unprecedented well-being concerns and rapidly evolving professional and scientific landscapes. Our strategy anticipates the future needs of a post-pandemic world and the opportunity to build an agile, flexible and resilient School of the Built Environment, shaped to deliver greater realisations in the UK and abroad. Through our staff and students, we can have a significant impact in progressing all of these areas.
